Director of organizing committee : Shigetoshi Omote

## Optimal Mirror Work and Positioning for Microscopic Dentistry

Hiroki Isozaki

The microscope is a tool for visual enhancement, and its effectiveness is already widely known and becoming more common in dentistry. However, not all parts of the oral cavity can be seen in detail as long as we have a microscope, and use of dental mirrors are essential skill in dentistry because centrifugal surfaces and proximal intraoral walls couldn't be seen without mirror. Although the use of dental mirrors is essential skill in dentistry, no systematic education has been provided at any university.

Until American dentist Daryl Beach systematized the use of dental mirrors as a systematic view, it was a matter of personal experience and difficult to transfer the technology. The lecturers believe that the systematic view is an essential technique for microscopic dentistry and have been conducting seminars to transfer the technique. With the cooperation of JAMD, we have decided to hold a hands-on seminar.

This hands-on seminar is a must-attend event for anyone who wants to become a microscopic dentist, as systematic view is the most powerful technique to improve treatment with microscope to several levels, from beginners to veterans.

### Biography

Graduated from Fukuoka Kyushu Dental College in 1987.

Studied under Dr. Beach at HPI Research Institute

Opened Shin-Osaka Ai Dentistry Isozaki Dental Clinic in 1994.

Studied under Dr. Beach at the same clinic

1999Opened Isozaki Dental Clinic

Joined JAMD in 2007

2010JAMD certified doctor

JAMD certified supervisor in 2018
